Waste Discharge Requirements  
For  
Napa County Wineries

1. The winery is required to monitor Dissolved Oxygen (DO), pH, Freeboard and Odor in and around the wastewater treatment pond on a weekly basis.
2. The winery is required to monitor Biological Oxygen Demand (BOD), Total Suspended Solids (TSS), Settleable Solids (SS) and flow in and from the wastewater treatment pond on a monthly basis.
3. The winery is required to generate self monitoring reports on a monthly basis. These reports must contain the information required as stated above.
4. The winery is required to submit a quarterly self monitoring report to Napa County Department of Environmental Management.
5. The winery is prohibited from land applying treated wastewater unless the following conditions are met:
  - A. BOD less than 50 ppm
  - B. TSS less than 50 ppm.
  - C. pH no less than 6.0 and no greater than 9.0
  - D. DO no less than 1.0 ppm
